The Future of Health Checkups

STEP INTO THE
Future of Health
with **Ai** Telemedicine

eHealth Management System

This Ai-powered Medical Kiosk serves as a digital hospital for remote, rural, and underserved communities. This kiosk is equipped with state-of-the-art remote assessment gadgets, enabling doctors to evaluate patients' physical conditions accurately.

Sleek and Modern

This portable unit fits well in any setting.

Modular

Its split design allows easy transport and setup for different locations.

Customizable

Versatile design to meet various customer needs.

Privacy

Translucent glass door provides privacy while allowing natural light.

Telemedicine Health Checkup Solution

1

Secure and Comfortable

Safe and comfortable user experience.

2

Large Screen

Easy operation with a big, interactive display.

3

Ergonomic

Convenient measuring area for easy use.

4

Telemedicine Support

HD camera for clear remote consultations.

5

Health Metrics

Optional body composition and ECG functions for detailed analysis.

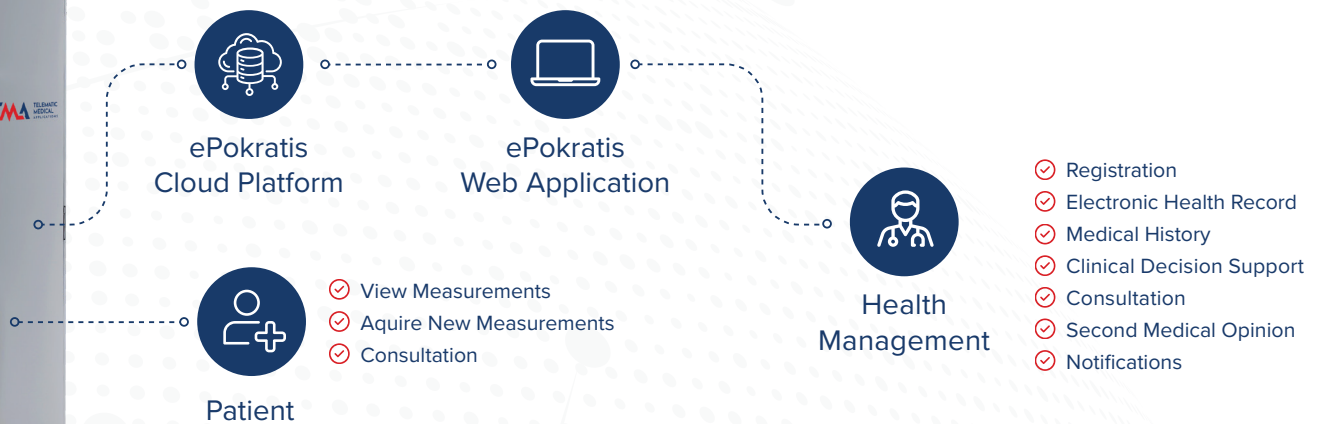

6

Accessible

Built-in blood pressure meter drawer for quick measurements.

Data Interconnection

Cutting-edge Functions

Height & Weight Precision

Measures within accuracies of ± 0.1 cm/kg.

21.5" Touch Screen Monitor

Simplifies operations and enhances user interaction.

Touchless Temperature

Accurate forehead measurements.

Blood Oxygen Levels

Monitors with high precision.

Advanced Blood Pressure Monitoring

Perfect for easy and quick measurement through noninvasive blood pressure monitor.

Optional Comprehensive Tests

Includes body composition and vital diagnostics.

Stethoscope

Accurately measures heart and lung sounds to aid in diagnosing cardiovascular and respiratory conditions.

Dermatoscope

Provides detailed images of skin conditions, allowing for accurate dermatological assessments.

Otoscope

Facilitates the examination of the ear canal and eardrum, essential for diagnosing ear infections.

Iris Scope

Captures high-resolution images of the eye, aiding in the diagnosis of various ocular conditions.

Body Fat Measurement

Helps monitor body fat percentage, contributing to overall health assessments and weight management.

Uric Acid Test

Measures uric acid levels in the blood, crucial for diagnosing gout and other metabolic conditions.

Total Cholesterol Test

Determines cholesterol levels, aiding in the assessment of cardiovascular health and risk factors.

Blood Lipids Test

Evaluates lipid levels in the blood, important for managing and preventing heart disease.

Blood Glucose Test

Monitors blood sugar levels, essential for managing diabetes and other endocrine disorders.

Where Can Be Used?

MediStation's versatile design makes it an ideal health management solution for a variety of settings and it can be used in:

This adaptable solution ensures that health care and monitoring can be seamlessly integrated into any environment, promoting well-being across various sectors.

Hospitals

Enhances patient care by providing immediate access to medical assessments and consultations.

Health Centers

Supports daily health management and monitoring needs in community health facilities.

Nursing Homes

Offers reliable health monitoring to ensure the well-being of elderly residents.

Hotels and Marinas

Enhances the tourism experience by offering guests and staff immediate health assessments, ensuring safety and well-being during their stay.

Monasteries

Serves isolated communities by enabling remote medical consultations and health checks.

Military Camps

Facilitates the maintenance of soldier health through regular and accessible health check-ups.
